This rock lies in nearly mid-slope of the Northern Passage. To clear it, dug closely the bold stone-cutters of Chester's Harbor Island.

Live oaks, 100 years old, stand near the base of the rock, which is about 25 yards from the coast.

The rock is about 100 feet high and 50 feet wide. Its extent, with 7 feet at mean high water on its shoaled spot, which is not less than 6 feet square. At the lowest spring tides there will probably not be less than 10 feet.
